PVC Fitting Covers and Jacketing Systems

Catalog and Pricing Guide

Industry leaders in the manufacturing of high gloss
white and colored fitting covers and jacketing

25/50 Smoke-Safe™ PVC

Standard Colors

The colors shown on this page are standard colors available in all Speedline® PVC fitting covers and jacketing. Colors are made-to-order with colored fitting covers and Jacketing having a high gloss finish.

Note: Colored PVC Fitting Covers and Jacketing are not recommended for outdoor use.

Inserts

Inserts priced with fitting covers will be packaged within the same boxes as the fitting covers unless requested to be packaged separately.

The Speedline® Smoke Safe™ PVC Insulated Fitting Covering System consists of preformed gloss white outdoor weatherable and gloss colored insulated covers for piping fittings. Their unique shapes fit screwed, Victaulic®, welded and flanged elbows, tees, valves, couplings, laterals, reducers and endcaps.

The Speedline® Smoke Safe™ PVC Jacketing System consists of gloss white outdoor weatherable and colored PVC sheet in either bulk rolls or precurled cut-to-fit pipe sizes. The White Jacketing is available in .010", .015", .020", and .030" thicknesses.

The Jacketing and Fitting Covering Systems include solvent weld adhesives, stainless steel tack fasteners, silicone caulking and adhesive tapes. A die-cut multi-temperature fiberglass insulation insert is available and sized for a full insulation over the exposed pipe fitting and under the overlay of the PVC Fitting Cover.

Specification Compliance

ASTM D 1784, Cell Class 16354,
Federal Specification HH-I-558, Form B,
Type 1 Class B (Insert Insulation)
USDA and FDA for use in food processing,
beverage, and pharmaceutical facilities
Military Spec LP-1035A, Type II Grade GU
Military Spec LP-535E, Type II Grade GU
New York City MEA 402-07-M,
Agriculture Canada, Canada: CGSB 51.53-95
CAN/ULC-S102

Applications

Speedline® Smoke Safe™ PVC Insulated Fitting Covers and Jacketing are designed for indoor and outdoor* applications in commercial, institutional and industrial facilities.

- Speedline® Smoke Safe™ PVC Fitting Covers are designed to cover pipe fittings and other mechanical equipment with an outside diameter of 1-5/8" up to 24" in accordance with ASTM C-585. For outdoor use and in high abuse areas, .030 is recommended. For straight runs of piping, expansion joints should always be used to prevent product failure.
- Speedline® Smoke Safe™ PVC jacketing is suitable for covering all flat and round surfaces such as ductwork, tanks and other mechanical equipment. On vessels larger than 24" OD a minimum of .040 Jacketing should be used. For OD's larger than 48", Speedline flat jacketing is not recommended. Due to the expansion and contraction of tanks and vessels, expansion joints should always be used to prevent product failure.
- The Speedline® Smoke Safe™ PVC Jacketing System has an application temperature range of -35°F to 500°F (-37°C to 260°C). The PVC surface should remain below 150°F (66°C) through the installation of sufficient insulation on higher temperature applications.

- **Easy Installation** - the unique shapes make an easy seal over an entire mechanical system
- **Clean, neat and attractive appearance** due to the high gloss PVC surface
- **Low maintenance**
- **Corrosion resistance**
- **Outdoor weatherability*** (UV stable)
- **The 25/50 fire class of all Speedline® Smoke Safe™ products provides greater universal building code acceptance**
- **Provides a natural barrier to moisture, bacteria and mold**

*** Colored fitting covers and jacketing are NOT recommended for outdoor use.**

Physical Properties

Specification Data

Hot Systems

All piping fittings shall be insulated by filling the total void over all fittings, between straight runs of pipe insulation, with Speedline® die-cut fiberglass insulation, forming a uniform insulation thickness equal to or exceeding the adjacent pipe insulation. Finish all insulated pipe fittings by applying Speedline® Smoke Safe™ PVC Fitting Covers overlapping the adjacent pipe insulation outer covering. Secure the Speedline® Fitting Covers with Speedline® Stainless Steel Tack Fasteners, Speedline® PVC Tape or by welding PVC overlaps with Speedline® Solvent Weld Adhesive. Caution should be exercised to be sure that the insulation surface temperature is maintained below 150°F (66°C) through the application of sufficient insulation under all PVC Covering.

Cold Systems

All piping fittings shall be insulated by filling the total void over all pipe fittings between straight runs of pipe insulation with Speedline® die-cut fiberglass insulation, forming a uniform insulation thickness equal to, or exceeding, the adjacent pipe insulation. Finish all insulated pipe fittings by applying Speedline® Smoke Safe™ PVC Fitting Covers overlapping the adjacent pipe insulation outer covering. The overlap of the throat of the PVC Fitting Cover and the ends of the Fitting Cover overlapping the adjacent pipe insulation vapor barrier jacketing shall be vapor sealed with compatible vapor barrier mastic. The ends of the PVC Fitting Cover overlapping the adjacent pipe insulation shall be further sealed by an outer wrapping of Speedline® PVC Tape extending over the adjacent pipe insulation vapor barrier jacketing and overlapping its own circumferential juncture by at least two inches in the downward direction on the downward side.

Chemical Resistance

Inorganic Acids

Sulfuric, nitric, hydrochloric, hydrofluoric (diluted or concentrated): Excellent

Organic Acids

Formic, acetic and propionic: Poor

Alkalies

Sodium and potassium hydroxides: Excellent
 Ammonium hydroxide: Excellent
 Caustic Soda: Excellent
 Soda Ash: Excellent

Miscellaneous Corrosive Chemicals

Phenol, resorcinol and creosol: Poor
 Iodine, crystals: Fair
 Iodine, tincture: Excellent
 Chlorine and bromine water: Excellent
 Potassium dichromate: Excellent
 Silver nitrate: Excellent
 Tannic acid: Excellent

Solvent and Dilutents

Alcohol and polyalcohols, including ethyl methanol, butanol and isopropyl alcohol: Excellent

Ketones

Lower boiling ketones: Dissolves
 Higher boiling ketones: Swells

Ethers

Ethyl: Softens
 Dichlorethyl ether: Swells
 Diethyl cellosolve: Swells
 Dioxane: Dissolves
 Propylene oxide: Dissolves

Hydrocarbons

Aromatics as gasoline, kerosene and petroleum oils: Excellent

Oils, Fats and Waxes

Animal, mineral and vegetable: Excellent

PVC Fitting Covers Application Details

Hot Systems

All piping fittings shall be insulated by filling the total void over all fittings between straight runs of pipe insulation with Speedline® die-cut fiberglass insulation, forming a uniform insulation thickness equal to, or exceeding, the adjacent pipe insulation.

Finish all insulated pipe fittings by applying Speedline® Smoke Safe™ PVC Fitting Covers overlapping the adjacent pipe insulation outer covering. Secure the Speedline® Fitting Covers with Speedline® Stainless Steel Tack Fasteners, Speedline® PVC Tape, or by welding PVC overlaps with Speedline® Solvent Weld Adhesive. Caution should be exercised to be sure that the insulation surface temperature is maintained below 150°F (66°C) through the application of sufficient insulation under all PVC Covering.

Cold Systems

All piping fittings shall be insulated by filling the total void over all fittings between straight runs of pipe insulation with Speedline® die-cut fiberglass insulation, forming a uniform insulation thickness equal to, or exceeding, the adjacent pipe insulation.

Finish all insulated pipe fittings by applying Speedline® Smoke Safe™ PVC Fitting Covers overlapping the adjacent pipe insulation outer covering. The overlap of the throat of the PVC Fitting Cover and the ends of the Fitting Cover overlapping the adjacent pipe insulation vapor barrier jacketing shall be vapor sealed with compatible vapor barrier mastic. The ends of the PVC Fitting Cover overlapping the adjacent pipe insulation shall be further sealed by an outer wrapping of Speedline® PVC Tape. The PVC Tape should extend over the adjacent pipe insulation vapor barrier jacketing and overlap its own circumferential juncture by at least two inches in the downward direction on the downward side.

Sealed System (USDA) for Fitting Covers and Jacketing Installation Details

All piping fittings shall be insulated by filling the total void over all fittings, between straight runs of pipe insulation, with Speedline® die cut fiberglass insulation, forming a uniform insulation thickness equal to, or exceeding, the adjacent pipe insulation.

Finish all insulated pipe fittings by applying Speedline® Smoke Safe™ Heavy Duty PVC Fitting Covers overlapping the adjacent pipe insulation outer covering. Seal the throat of the PVC Cover by laying a bead of Speedline® Solvent Weld Adhesive on the underside of the overlap.

Install pre-curved cut-to-size 20 mil or 30 mil Speedline® Smoke Safe™ Jacketing with the end overlapping the Heavy Duty PVC Fitting Cover by one or more inches and each progressive section likewise overlapping the prior section. All longitudinal and circumferential overlaps shall be sealed by laying a bead of Speedline® Clear or White Solvent Weld Adhesive on the underside of the overlap. The sealed laps shall be held firmly in place for at least 10 minutes of initial set; final cure occurs over the first 10 hours.

An allowance for expansion shall be provided on all sealed system applications by providing slip-joints as required between rigid pipe supports, on long pipe runs, etc. Slip-joints shall be 6 to 8 inch jacketing overlaps sealed with non-hardening mastic.

Hot Systems

Caution should be exercised to be sure that the insulation surface temperature is maintained below 150°F (66°C) through the application of sufficient insulation under all PVC Covering. The PVC Fitting Covers and Jacketing should be further protected from any direct or radiant exposure to heat exceeding 150°F (66°C).

Note: High temperature installation should incorporate slip-joints to compensate for thermal expansion and contraction of the piping system. Slip-joints can be performed by applying white flexible caulking to the overlap between jacket systems.

Cold Systems

For refrigerant lines and colder, a vapor barrier jacketing will be provided under the outer wrapping of the PVC Jacketing. The fitting insulation should be vapor sealed with vapor barrier mastic prior to the installation of the PVC Fitting Cover.

Low Profile Victaulic® Fitting Cover Installation Data

After securing a sufficient amount of fiberglass fitting insulation blanket over all surfaces of the Victaulic® elbow or tee, the following installation details are suggested for utilizing Speedline Low Profile Victaulic® Fitting Covers.

Sizing Fitting Covers

Before joining the two halves of the PVC Covers, trim off the outer stepped-down ends to the size of the adjoining pipe insulation (see available sizes below). Trim off the appropriate step along its outer edge, retaining a wide flat surface to rest solidly onto the adjoining pipe insulation (see picture to right).

Once trimmed to size, the two halves can be joined with White SS Tack Fasteners for ease of installation. Align the SS Tack Fasteners piercing the dimples along the heel/centerline of the cover. Insert the tacks into the outer half first and then push them through the corresponding dimples of the inner half, working from the centermost points outward.

Pipe Size	Available Flange OD	Max. OD
2"	2 × ½", 1", 1½", 2"	7⅜"
2½"	2½ × ½", 1", 1½", 2"	7⅝"
3"	3 × ½", 1", 1½", 2"	7⅞"
4"	4 × ½", 1", 1½", 2", 2½"	9⅝"
5"	5 × ½", 1", 1½", 2"	11¼"
6"	6 × ½", 1", 1½", 2", 2½"	11¾"
8"	8 × ½", 1", 1½", 2", 3"	15"
10"	10 × 1", 1½", 2", 3½"	18"
12"	12 × 1", 1½", 2", 3½"	20"
14"	14 × 1", 1½", 2", 4"	22"

Two or More Fittings with a Common Grooved Coupling

All Low Profile Victaulic® Fitting Covers have a grooved line defining the center line of the Victaulic® Grooved Coupling. By cutting off one Fitting Cover along this line, and the second Fitting Cover ⅛" into the outer edge of the large flange, you have a geometrically matched pair (see picture to the right). Since this center line is either at the crotch of the fitting cover or before the crotch, the two overlapping Fitting Covers can be rotated to any angle (see picture on next page).

Cut off the right half and the left half along the outer edge (in ⅛") of the largest flange; cut off the right and left halves along the scribe line/centerline of the large flange; install the shorter/second cut halves over the top of the first cut halves, pressing the inside lip of the outer half against the outer edge of the first cut – a dimensionally correct combination results!

Low Profile Victaulic® Fitting Cover Installation Data (continued)

Two or More Fittings with a Common Grooved Coupling and a Pipe Size Reduction

Starting with the larger Fitting Cover, cut off the outer portion making the cut along the centerline molded into the large flange. Attach a Speedline Reducer onto and tightly against the cut edge; attach with PVC Tape, Speedline Solvent Weld Adhesive, or another suitable adhesive. Cut off the end of the smaller Fitting Cover, making the cut along the centerline molded into the large flange; attach the cut edge tightly to the lesser step of the Speedline Reducer (see picture to right).

Example (as shown):

The picture shows the covering for a 6" x 6" x 3" Victaulic® Tee with a directly attached (common coupling cover) 3" 90° Victaulic® Elbow. The two ends of the 6" Tee Cover are cut off to cover 6 x 2 Fiberglass Pipe Covering. The third leg of the Tee Cover is cut to receive an 1 1/4" to 7/8" Speedline Reducer. The 3" Elbow Cover is cut off on the **centerline groove** on the upper end. The downstream end is cut off on the 1/2" flange to cover 3 x 1/2 Fiberglass Pipe Covering.

The sizing of the Speedline Reducer can be taken from the **Max. OD** column on the preceding page, as 1 1/4" OD for a 6" cover and a 7/8" OD for a 3" cover.

The picture to the right shows many of the challenging problems encountered when covering Victaulic® type grooved pipes. Our innovative Low Profile Covers provide the solutions to your needs.

PVC Fitting Cover Sizing Charts

Speedline Smoke-Safe™ PVC Fitting Covers are furnished in generic sizes where possible and specific individual sizes where required. Generic fitting cover sizes comply with pipe insulation dimensional standards ASTM C-585. Generic sizes extend from a #2 (1½" OD) through a #37 (28" OD); see Charts A and B.

Chart A - Iron Pipe Sizes									
Pipe Size	Insulation Thickness (in.)								
	½	JM Knauf	1	1½	2	2½	3	3½	4
¾	2		7	9					
½	3		7	10	12	15	17	18	19
¾	5	4	7	10	12	15	17	18	19
1	5		9	11	13	15	17	18	19
1¼	7	6	9	12	13	15	17	18	19
1½	7		10	12	15	17	18	19	20
2	9		11	13	15	17	18	19	20
2½	10		12	15	17	18	19	20	21
3	11		13	15	17	18	19	20	21
3½	12		15	17	18	19	20	21	22
4	13		15	17	18	19	20	21	22
5	15		17	18	19	20	21	22	23
6	17		18	19	20	21	22	23	24

Note: Shaded sizes are available in **Round End Caps** only and packaged to order.

Oval (adjustable) End Caps have a cross scribe line for field cutting; this cut allows an overlapping of two halves for a neat circumferential cap. The Oval End Caps also have circular scribe lines providing a quick easy guide to cutting out the cap's inside, producing a simple reducer. The Round End Caps are a neat circular cap of an outside diameter of standard pipe insulation dimensions.

Oval End Cap

Round End Cap

Inline Reducers are round reducers providing an easy, neat reduction from one insulation outside diameter to another. They are formed as full round bodies with generous full extensions.

Each specific size should be cut off at the noted outside diameter to provide a proper fit.

Low Profile Victaulic® Fitting Covers

Each **Victaulic® Type Fitting Cover** has stepped outer laps for neatly overlapping a ½", 1", 1½" or 2" pipe insulation thickness for the pipe sizes shown (10" covers and larger do not have a ½" lap). Additional outer diameters are provided for 4" and larger covers. For example, 14 × 1 through 14 × 4, all in one fitting cover (see page 8 and 9 for all sizes and installation details).

Low Profile Victaulic® Tee Cover

Low Profile Victaulic® 90° and 45° Elbow Cover

Victaulic® Coupling Cover

Larger size Victaulic® Type Coupling Covers will accommodate two different outside diameters.

Original Sealed Victaulic® Fitting Covers

90° and 45° **Victaulic Elbow Covers** are made in two half sections which are available sealed as a one piece cover (for ease of installation).

Each Fitting Cover has stepped outer laps for neatly overlapping a ½", 1", 1½" or 2" pipe insulation thickness for the pipe sizes shown (see picture for cut-off steps).

Note: For an insulation thickness of 2" or more use more than one insert as needed.

For Victaulic® Type Coupling Covers see page 16.

Oval (Adjustable) End Caps have a cross scribe line for field cutting; this cut allows an overlapping of two halves for a neat circumferential cap. The Oval End Caps also have circular scribe lines providing a quick easy guide to cutting out the cap's inside to produce a simple reducer. The Round End Caps are a neat circular cap of an outside diameter of standard pipe insulation dimensions.

Oval End Cap

Inline Reducers are concentric reducers providing an easy, very neat reduction from one insulation outside diameter to another. They are formed as full round bodies with generous full extensions.

Reducer

	Tee	3 × 1		3 × 1½	3 × 2	4 × 2
5½	90°	5 × ½		5 × 1	5 × 1½	5 × 2
	45°	5 × ½		5 × 1	5 × 1½	5 × 2
	Tee	5 × ½		5 × 1	5 × 1½	5 × 2
6½	90°	6 × ½		6 × 1	6 × 1½	6 × 2
	45°	6 × ½		6 × 1	6 × 1½	6 × 2
	Tee	6 × ½		6 × 1	6 × 1½	6 × 2

Each specific size should be cut off at the noted outside diameter to provide a proper fit.

Low Profile Victaulic® Fitting Covers - Color

Each Victaulic® Type Fitting Cover has stepped outer laps for neatly overlapping a ½", 1", 1½" or 2" pipe insulation thickness for the pipe sizes shown (10" Covers and larger do not have a ½" lap). Additional outer diameters are provided on 4" and larger Covers. Example: 14 × 1 through 14 × 4, all in one fitting cover (see pages 8 and 9 for all sizes and installation details).

Note: For an insulation thickness of 2" or more, use more than one insert as needed.

45° Low Profile Victaulic® Cover

Standard Colors

The colors shown here are all standard colors and are available in all Speedline® PVC fitting cover sizes, types and all jacketing. Colors are made-to-order and price separately. Please consult your sales rep for more information. All colored fitting covers and jacketing have a high Gloss finish.

Colors from Left to right:

White, Black, Brown, Tan, Yellow, Red, Orange, Purple, Green, Pea Green, Dark Grey, Light Grey, Dark Blue, Light Blue. Please consult your sales rep on custom colors.

(*) Items are furnished as the equivalent numbered SR Elbow Cover.

Sizes in shaded area are two-piece/unsealed only.

Extra heavy gauge Heavy Duty Fitting Covers are available upon request.

Note: For an insulation thickness of 2" or more, use more than one insert as needed.

90° Heavy Duty Elbow Cover shown in green. Standard color is white.

Heavy Duty Round End Cap shown in standard color of white.

Heavy Duty Reducer shown in standard color of white.

Inline Reducers are concentric reducers providing an easy, very neat reduction from one insulation outside diameter to another. They are formed as full round bodies with generous full extensions.

Note: Reducers are packaged to order. Price covers by the larger OD and state the required reduced size when ordering. An example 8½" OD (@ \$6.75) reduced to 6½". Covers are provided without inserts.

PVC Fittings and Cut & Curl Jacketing - Quick Reference Sizing Charts

The following composite charts are based on the PVC Fitting Cover Sizing Charts on page 10 and the PVC Jacketing Sizing Charts on page 19.

These quick reference charts list each PVC fitting size in bold and its corresponding Cut & Curl Jacketing size in parentheses to the right.

Iron Pipe (Combining Chart A on p. 10 with Chart D on p. 19)								
Pipe Size	Insulation Thickness (in.)							
	½	1	1½	2	2½	3	3½	4
¾	2 (-)	7 (3.0)	9 (3.5)

Terms and Conditions of Sale

Color Fittings:

All colored fittings are made to order and non-cancellable after they are produced, even if they have not yet been shipped.

Prices:

All prices are net F.O.B. Greensboro, NC; Cleveland, OH; or Stockton, CA and subject to change without notice. All orders are subject to prices prevailing at the time of shipment.

Standard Terms:

Net 30 days. All sales tax imposed by any federal, state, municipal or other legal government authority shall be paid by the customer. All payments are due in U.S. currency.

Minimum Sale:

Orders for less than \$150 list value shall be invoiced at list price, (no discount to apply), plus a \$25 handling charge.

Freight Allowance:

Freight will be prepaid and allowed on orders within the Continental U.S. having a list value of \$4,000.

Returns:

Returned merchandise will be accepted for credit only after written authorization and an explanation of restocking and freight charges have been sent to the customer. Any prior approved return shipment must be clearly identified with our assigned Return Goods Authorization Number (RGA#). Credit will be issued only after an inspection of the return goods has been taken.

Shipping Shortages and Damages:

All materials are carefully examined, counted and packaged prior to shipping. Any claims for corrections must be made within 10 days of receipt of goods. Our responsibility ceases when goods are transferred to a carrier in good condition and its receipt is obtained. Carriers are responsible for goods lost, damaged or delayed in transit. All materials should be carefully checked for damage and shortages before signing for freight delivery.

Warranty:

Speedline warrants all products to be free from defects in materials and workmanship under normal conditions of use and service. Our obligation under this warranty is limited and will only cover full replacement or credit for product which shall, within one year, after delivery to the original purchaser be returned with transportation charges prepaid and which our examination shall show to our satisfaction to have been defective. This warranty is expressly made in lieu of all other warranties, expressed or implied.
