

Termination Gasket

PRODUCT DESCRIPTION

Integrity Products Termination Gasket compartmentalizes your pipe insulation system. Installed at regular intervals or at strategic locations, the Termination Gasket will stop moisture travelling along an insulation system and destroying the insulation. By containing any leaks or water ingress, you can potentially save millions of dollars on the removal and install of insulation. The Termination Gasket is non-metallic providing a completely watertight solution in comparison to metal end cap terminations, saving future maintenance costs and failures due to corrosion under insulation (CUI). Made solid state silicone rubber, Integrity Products Termination Gasket is self-extinguishing, non-melting in fire, and halogen free.

PRODUCT APPLICATION

Integrity Products Termination Gasket offers an insulation friendly termination that saves installation time and maintenance costs with lower risks of injury. The Termination Gasket does not require any modifications to fit, reducing install time and cutting costs significantly—no specially qualified metal working personnel are required for installation. Made with solid state silicone rubber, there is no risk of cutting injuries to personnel and no risk of damage to heat tracing or the coating system.

SIZES AVAILABLE

All pipe sizes and insulation thicknesses.

MATERIAL SPECIFICATIONS

MATERIAL(S)

Solid State Silicone

UV RESISTANCE

Excellent

TENSILE STRENGTH

Minimum: 8,5 Mpa

COLOUR

Grey

FLAMMABILITY

Self Extinguishing, Non Flammable

ELONGATION TO FAILURE

Minimum: 300%

TEMPERATURE RANGE

-120°F to 480°F (-84°C to 250°C)

HARDNESS

60 ± 5 Shore A
